

Pinwheel Instructions

Assembly is easy! (in fact, it is *much* easier to assemble than it is to explain how!) Just print on white card stock, have the kids color and cut out the circle/star and the pinwheel, snipping between the pinwheel's "wings" down to the small dot. Using a large needle or push pin, poke a hole into the dot in the center of the circle/star, into the dots on the end of each wing, and into the dot in the center of the pinwheel. Then take a 5/16" dowel rod (I painted mine red first) and slide an eraser cap onto it. Next, insert a long pin through the hole in the circle/star, then fold the four wings towards the center and insert the pin through the holes. Finally, insert the pin through the large center dot and into the eraser (if you want it to really spin freely, add a small bead between the pinwheel and the eraser). Make sure the pin doesn't poke out the back of the eraser or it will stick you (please exercise caution when it comes to the kiddos).

We hope you enjoy this fun craft!
